                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a recombinant phytase (EC 3.1.2.8) protein and its encoding also nucleic acid molecule. Phytases of the invention is a thermostable protein. They are useful in foodstuffs, for oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also useful in gene therapy and in production of transgenic animals. The present sequence is the SEQ ID NO: 1 which is given in the sequence listing. This sequence differs from the SEQ ID NO: 1 shown on page 19 in disclosure of the specification (see AED50824).

The invention discloses a new isolated or recombinant nucleic acid which concleic acid probe, an amplification primer sequence pair, an expression cassette comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic conveleic acid, an antisense oligonuclectide, inhibiting the translation of a second domain, an array comprising immobilised polypeptide and cell, a heterodimer comprising the polypeptide and second domain, an array comprising immobilised polypeptide or nucleic colid, a hybridoma comprising an antibody that specifically binds to the polypeptide, a food supplement for an animal, an edible enzyme delivery matrix, an edible pellet comprising a granule edible enzyme delivery colypeptide, making an anti-phytase antibody, producing a recombinant conformation, a soybean meal, isolating or identifying the polypeptide, making an anti-phytase antibody producing a recombinant conformation or the metabolic flux analysis, increasing conformation or the resistance or thermostability of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a consitul and processing of corn and sorghum kernels. The phytase activity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytase rich ingredients or encoding the modified Escherichia coli phytase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-AUG-1997;

The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as guppy, zebrafish, molly, swordtail, CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase mutant DNA.

Alignment Scores: Pred. No.:
                                                                               of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid complement for preventing muscle cramps; a hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing pollution and increasing culturent availability in an environment or environmental sample by complement useful for treating, preventing or reversing osteoporosis or cupilement useful for treating, preventing or reversing osteoporosis or complementing muscle cramps. The liquid supplement is useful for preventing muscle cramps. The novironment or environmental complement or environmental sample by degrading environmental phytic acid, where the environmental complement or environmental sample comprises a soil or a body of water. The immobilized comprises a soil or a body of water the immobilized phytase is useful in foodstuffs for improving the feeding value of phytate rich ingredients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-AUG-1997;

                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of a polynucleotide encoding a novel modified phytase derived from the Escherichia coli appA protein, with improved thermal tolerance and protease stability compared to the wild-type. The present invention relates to a novel formulation, comprising at teast one polypeptide having phytase activity, where the polypeptide is a modified sequence (AEE75421) derived from the Escherichia coli K-12 appA phytase (AEE75419). The modification of the enzyme, comprising a series

The present sequence is that of a polynucleotide encoding a novel modified phytase derived from the Escherichia coli appA protein, with improved thermal tolerance and protease stability compared to the wild-type. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (AEE75421) derived from the Escherichia coli K-12 appA
                                                                                Formulation useful as dietary supplement for treating, preventing or reversing osteoporosis and bone loss, and preventing muscle cramps, comprises one or more polypeptides having phytase activity.
                                                                 Claim 1; Page; 82pp; English.

CC phytase (AEE75419). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of CC the protein. The specification also claims a pharmaceutical composition; CC a kit; an immobilized phytase; a fertilizer or soil additive; a liquid CC supplement for preventing muscle cramps; a hydrating agent; a tissue CC culture or cell culture media; and a plant food additive, all comprising CC the novel phytase, and a method of reducing pollution and increasing cC nutrient availability in an environment or environmental sample by CC degrading environmental phytic acid. The novel enzyme is a dietary supplement useful for treating, preventing or reversing osteoporosis or cc bone loss, and preventing muscle cramps. The liquid supplement is useful CC for preventing muscle cramps. The method is useful for reducing pollution CC and increasing nutrient availability in an environment or environment or cc environmental sample comprises a soil or a body of water. The immobilized complete by degrading environmental phytic acid, where the environment or cc environmental suseful in foodstuffs for improving the feeding value of CC phytase is useful in foodstuffs for improving the feeding value of cc specification but was created from the wild-type sequence (AEE75418) and cc the information given in claim 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-10-601-319-10 (1-432) x AEE75422 (1-1901)

CC The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC endified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase mutant DNA.

ANC A
                                         The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as guppy, zebrafish, molly, swordtail, CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase mutant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-APR-1999;

The present sequence is a DNA sequence related to the production of the CC cover thermostable / protease resistant Escherichia coli phytase CC described in the specification. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity. CC where the polypeptide is a modified sequence (AEB75421) derived from the Escherichia coli K-12 appA phytase (AEB75419). The modification of the CC enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a CC pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive, a liquid supplement for preventing muscle cramps; a CC hydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the movel phytase, and a method of reducing CC pollution and increasing the movel phytase, and a method of reducing CC enzyme is a dietary supplement useful for treating, preventing or creversing osteoporosis or bone loss, and preventing muscle cramps. The CC inquid supplement is useful for preventing muscle cramps. The mention or environmental sample by degrading environmental phytic acid, where the environment or environmental sample by degrading environmental phytic caid, where the environment or environmental sample comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of phytate is useful not discussed cramps in the sequence is shown in the sequence listing but not discussed cramps in the specification.
